

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Original) A write control method, being a write control method for controlling writing of file into storage means by making use of file management system by an operation system as basic software of computer system, by control means for executing various control processes in a computer system,

wherein write control means changes over permission or rejection of writing into the storage means on the basis of changeover input by a user, and

transmits to the storage means by way of the write control means when transmitting a write command to the storage means in the file management system.

2. (Original) The write control method of claim 1, wherein the write control means is provided with a switch, and permission or rejection of writing can be physically changed over by this switch .

3. (Currently Amended) The write control method of claim 1 ~~or 2~~,  
wherein when permitting writing by the write control means, the write  
command is passed, and  
when rejecting writing, the write command is blocked.

4. (Currently Amended) The write control method of claim 1, ~~2 or 3~~,  
wherein the write control means rejects writing when the user has  
changed over to reject writing by input of changeover and the file of write  
command is a file of write rejected type, and  
permits writing otherwise.

5. (Currently Amended) The write control method of claim 1 ~~any  
one of claims 1 to 4~~,  
wherein the write control means rejects writing when the user has  
changed over to reject writing by input of changeover and the folder holding  
the file according to the write command has been set in write rejection, and  
permits writing otherwise.

6. (Original) A computer system comprising:  
control means for executing various control processes,  
storing means for storing a file,

the control means executing writing of file into the storing means by making use of file management system by an operation system as basic software, and

write control means for controlling changeover of write permission or rejection into the memory means on the basis of changeover input by a user,

wherein the file management system is set to transmit to the storing means by way of the write control means when transmitting the write command to the storing means.

7. (Original) The computer system of claim 6,  
wherein the write control means is composed of a switch for changing over write permission or rejection physically.

8. (Currently Amended) The computer system of claim 6 ~~or 7~~,  
wherein the write control means is composed as follows:  
when permitting writing by the write control means, the write command is passed, and  
when rejecting writing, the write command is blocked.

9. (Currently Amended) The computer system of claim 6, ~~7 or 8,~~

wherein the write control means is composed as follows:

writing is rejected when the user has changed over to reject writing  
by input of changeover and the file of write command is a file of write  
rejected type, and

writing is permitted otherwise.

10. (Currently Amended) The computer system of claim 6 ~~any one  
of claims 6 to 9,~~

wherein the write control means is composed as follows:

writing is rejected when the user has changed over to reject writing  
by input of changeover and the folder holding the file according to the write  
command has been set in write rejection, and

writing is permitted otherwise.

11. (Currently Amended) A write control program for executing the  
write control method as set forth in claim 1 ~~any one of claims 1 to 5.~~

12. (Original) An operating system incorporating the write control  
program of claim 11.
